Backup Solutions

Key benefits:

- Backup integrity – our team of fully qualified engineers hand check your backup on a daily basis.

- Disaster recovery - in the event of a disaster all your business critical information is stored away from your office so you will always have an up-to-date copy.

- Peace of mind - we own our data centre and infrastructure which means we never need to rent from or rely on 3rd parties.

- Reduced costs – our backup solutions eliminate the upfront costs of implementing enterprise level disaster recovery.

Backup Solutions

A robust, tried and tested backup solution must be an integral part of your IT strategy. Files, folders or the entire contents of hard drives should regularly be backed up, ensuring your critical business information is safely duplicated and stored in case of any kind of disaster or accident.

We can tailor the perfect backup solution to maximise business continuity. Our backup and replication systems ensure that in the event of a disaster your business will be back up and running as quickly as possible.

Our solutions range from a simple remote backup of your data to an on-site backup with off-site replication.

We can audit your system and discuss your needs to give you a backup solution that you can trust to really work.

Please get in touch to talk through your requirements and we can help you find a solution that fits.
